FLORISSANT FOSSIL BEDS—A Miocene Pompeii

Flowers, birds, fish, insects and many other strange forms of plant and animal life of the Miocene period, are perfectly preserved in volcanic shale rock, deposited in layers, which readily split apart, revealing the specimens just as they were buried during the volcanic eruptions, in prodigious numbers. Stop is made on return trip to gather specimens.

MOUNTAIN WILDFLOWERS

The purple thistles; the dainty blue bells and the fragile wind flowers; fiery Indian pinks, purple asters and delicate primroses, mariposa and tiger lilies, golden rod; sprays of mountain cypress; snow stars, woodbine and pale green clematis and millions of purple and white blossoms of the beautiful columbine, and countless other flowers, bend in the winds from the snow-white mountains. Varieties change as the season progresses. Ample time is given at the wildflower fields on return trip to gather bouquets of the varieties then in bloom.
